

JISLON (Europe) B.V.

The largest range  
**mirrors**

## JISLON (Europe) B.V.

The traffic mirrors from JISLON (Europe) B.V. distinguish themselves in the market through a number of unique properties. Not only the quality of the mirrors make them market-leading, above all the modular character is unparalleled. Because the mirrors are build up out of separate parts, they can be replaced easily and cheaply if necessary. In addition, the exceptionally large range and decades of experience and development ensure that JISLON can offer a tailor-made solution for every situation.

Thanks to this expertise, JISLON has been a pioneer in the industry for many years. For example, JISLON was the first in Europe to introduce the anti-fog mirror. SJC-Japan's innovative HYDRO-KLEAN technology reduced condensation of the mirror by 95%.

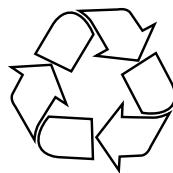

Because every situation requires a different solution, JISLON offers a choice of many different materials, each with its own specific properties. Thanks to the excellent image quality of all these individual mirrors, visibility can be improved in every conceivable situation, significantly reducing the risk of accidents.

Design and printing  
Weemen Groep BV

As part of the Sekisui Jushi Corporation, JISLON holds great value in the constant improvement in sustainability. And that doesn't only mean that JISLON's mirrors are of such a high quality that they just last a very long time. The mirrors have also been developed in such a manner that they are fully recyclable. In this way, JISLON makes an important contribution to the global efforts to combat climate change and contribute to a cleaner, greener future.

# The right choice

In order to make the right choice, it is important to first determine where the mirror will be placed and what requirements it must meet. You can then choose from different types of material, each with its own specific properties.

## Acrylic (PMMA),

Most commonly used type of material because of its very favorable price-quality ratio. Clear reflection and high impact resistance. HACCP suitable.

## Polycarbonate (PC),

Vandal resistant material with a clear reflection, ideal for use in areas prone to vandalism. HACCP suitable.

## Glass,

Weather and scratch resistant with a particularly clear reflection.

## Safety Glass,

Glasses that cannot shatter in the event of a break due to a special safety film.

## Stainless steel,

Type of metal known for its particularly long service life and increased resistance to acids and corrosion. The stainless steel from JISLON also has an extremely sharp image due to high-quality polishing.

## Stainless Steel Anti-condensation,

Thanks to the unique hydrophilic HYDRO-KLEAN coating 95% of the mirror's condensation is prevented. This means that no power supply is required, which means that the mirror can be placed flexibly.

## Stainless Steel Anti-freeze,

Special padding between the mirror and the frame ensures 95% less ice build-up. This means that no power supply is required, which means that the mirror can be placed flexibly.

## Heated Mirrors,

All mirrors can be equipped with a heating element to prevent condensation and ice formation.

## SPECIALS,

All mirrors can be fully adjusted to your personal liking. Ask our sales team about the possibilities.

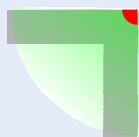

Determine the desired diameter of the mirror using the viewing angles below and the distance table with the product.

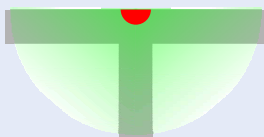

BE AWARE:

The dimensions are guidelines and may differ per situation.

## Safety through overview

Every municipality wants its residents to live comfortably and safely. The Police Quality Mark Safe Living (PKVW) reduces the risk of burglary and contributes to social safety in and around homes, residential complexes and in neighborhoods and districts. A home with the Police Quality Mark Safe Living meets the requirements in the field of burglary prevention and social security. It simply takes a burglar more time to enter such a home.

The PKVW requirements and recommendations do not only have a preventive effect against domestic burglary. Other forms of crime, such as nuisance and vandalism, are demonstrably declining. The quality mark thus contributes to a safe neighborhood where people live pleasantly.  
(source: [www.politiekeurmerk.nl](http://www.politiekeurmerk.nl))

## The requirements that an SKG mirror must meet:

### Fire resistance

Tested with a disposable cigarette lighter with adjustable flame height. Flame height approx. 4 cm. Resistant means: As soon as the flame is removed, the fire must be extinguished within 5 seconds. Time: 1 minute per place.

### Resistance to impact

A 4.1 kg steel ball is dropped from a height of 1600 mm at a maximum of three places on a product mounted in accordance with the installation instructions.

### Impact tool resistance

The sole purpose of this test is to test the strength of the mirror itself. Mass of the hammer incl. fastener on arm is 4.85 kg, drop height is 850 mm. Resistance to manual attack. Mirrors must withstand a manual attack with various tools, including screwdrivers, pocket knives and various pliers. This attack lasts 5 minutes.

### Explanation:

SKG-V mirrors are suitable for enclosed spaces such as storage corridors and halls in apartment complexes.

SKG-VV mirrors are suitable for public areas such as back paths, entrances and hallways.
